No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1993 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

Contents of Volume 30

Number 1, July 1993

Valérie Grandjean, Jacqueline Nguyen, Yolande Hauck, and Luisa Hirschbein. Establishment of a New Replicon Generated from an Integrational Plasmid and a Cryptic pUB110 Origin-like Region in *Bacillus subtilis* 1

Jürgen Robert Klein, Christof Ulrich, and Roland Plapp. Characterization and Sequence Analysis of a Small Cryptic Plasmid from *Lactobacillus curvatus* LTH683 and Its Use for Construction of New *Lactobacillus* Cloning Vectors ... 14

Helena Cerin and Jim Hackett. The *parVP* Region of the *Salmonella typhimurium* Virulence Plasmid pSLT Contains Four Loci Required for Incompatibility and Partition 30

H. W. Stokes, C. Tomaras, Yvonne Parsons, and Ruth M. Hall. The Partial 3′-Conserved Segment Duplications in the Integrons In6 from pSa and In7 from pDGO100 Have a Common Origin 39

D. A. Court and H. Bertrand. Expression of the Open Reading Frames of a Senescence-Inducing, Linear Mitochondrial Plasmid of *Neurospora crassa* 51

Daniel K. Y. Solaiman and George A. Somkuti. Shuttle Vectors Developed from *Streptococcus thermophilus* Native Plasmid 67

Short Communication

Scott R. Waterman, Jim Hackett, and Paul A. Manning. Indirect Evidence for Two Distinct Mechanisms of DNA Cleavage at the *oriT* of RP4 during Conjugation 79

Number 2, September 1993

Regular Articles

Xu Cao, James Kolonay, Jr., Kellie A. Saxton, and Richard A. Hartline. The OCT Plasmid Encodes D-Lysine Membrane Transport and Catabolic Enzymes in *Pseudomonas putida* 83

John G. Cobley, Edward Zerweck, Richard Reyes, Anahita Mody, J. Racquel Seludo-Unson, Heidi Jaeger, Siromi Weerasuriya, and Sutip Navankasattusas. Construction of Shuttle Plasmids Which Can Be Efficiently Mobilized from *Escherichia coli* into the Chromatically Adapting Cyanobacterium, *Fremyella diplosiphon* 90

Hidenori Kiyosawa, Joanne E. Hughes, Gregory J. Podgorski, and Dennis L. Welker. Small Circular Plasmids of the Eukaryote *Dictyostelium purpureum* Define Two Novel Plasmid Families 106

SØREN M. MADSEN, LARS ANDRUP, AND LARS BOE. Fine Mapping and DNA Sequence of Replication Functions of *Bacillus thuringiensis* Plasmid pTX14-3 ... 119

LUIS SERVÍN-GONZÁLEZ. Relationship between the Replication Functions of *Streptomyces* Plasmids pJV1 and pIJ101 ... 131

RENÉ REZSÖHAZY, BERNARD HALLET, JACQUES MAHILLON, AND JEAN DELCOUR. IS*231*V and W from *Bacillus thuringiensis* subsp. *israelensis,* Two Distant Members of the IS*231* Family of Insertion Sequences ... 141

KAZUO SUTOH. A Transformation Vector for *Dictyostelium discoideum* with a New Selectable Marker *bsr* ... 150

SHORT COMMUNICATIONS

LESLEY A. BOYD, ADRIENNE WOYTOWICH, AND GOPALAN SELVARAJ. Target Sequence Specificity of Transposon Tn*5* in the Absence of Major Hotspots in the Plasmid pBR322: Identification of a New Hotspot ... 155

MICHAEL D. EISENBRAUN AND JEFFREY K. GRIFFITH. Effects of Plasmid pBR322 on Respiratory and ATPase Activities in *Escherichia coli* ... 159

GORDON G. GUAY, SALEEM A. KHAN, AND DAVID M. ROTHSTEIN. The *tet*(K) Gene of Plasmid pT181 of *Staphylococcus aureus* Encodes an Efflux Protein That Contains 14 Transmembrane Helices ... 163

JAMES L. OCCI, PATRICE H. GIBBONS, EMILY WONG, AND DOUGLAS J. MACNEIL. Insertion of Transposon Tn*5*seq1 into G+C-rich DNA of *Streptomyces avermitilis:* Generation of 8-, 9-, and 10-bp Duplications ... 167

CYNTHIA T. HEDREYDA, KYUNGOK K. LEE, AND DUNCAN C. KRAUSE. Transformation of *Mycoplasma pneumoniae* with Tn*4001* by Electroporation ... 170

LETTERS TO THE EDITOR

KEVIN DYBVIG. The Genetics and Basic Biology of *Mycoplasma pulmonis*: How much is actually *Acholeplasma*? ... 176

F. CHRIS MINION. Reply ... 177

MEETING ABSTRACTS

KENNETH J. CARTER. Proceedings of the Sixteenth Annual Mid-Atlantic Extrachromosomal Elements and Molecular Genetics Meeting ... 179

NUMBER 3, NOVEMBER 1993

REGULAR ARTICLES

LIAM T. SEERY, NIAMH C. NOLAN, PAUL M. SHARP, AND KEVIN M. DEVINE. Comparative Analysis of the pC194 Group of Rolling Circle Plasmids ... 185

BRENT L. NIELSEN, ZHUN LU, AND KRISHNA K. TEWARI. Characterization of the Pea Chloroplast DNA *Ori*A Region ... 197

CHRISTOPHE FREMAUX, MICHEL AIGLE, AND ALINE LONVAUD-FUNEL. Sequence Analysis of *Leuconostoc œnos* DNA: Organization of pLo13, a Cryptic Plasmid . 212

François Doignon, Michel Aigle, and Pascal Ribereau-Gayon. Resistance to Imidazoles and Triazoles in *Saccharomyces cerevisiae* as a New Dominant Marker 224

Yan A. Su and Don B. Clewell. Characterization of the Left 4 kb of Conjugative Transposon Tn*916*: Determinants Involved in Excision 234

G. Thomas Hayman and Paul L. Bolen. Movement of Shuttle Plasmids from *Escherichia coli* into Yeasts Other Than *Saccharomyces cerevisiae* Using Trans-kingdom Conjugation 251

David St. J. Astill, Paul A. Manning, and Michael W. Heuzenroeder. Characterization of the Small Cryptic Plasmid, pIMVS1, of *Salmonella enterica* ser. Typhimurium 258

Instructions to Authors

The primary content of the Journal consists of reports of original research into the biology of extrachromosomal gene systems and mobile genetic elements in both prokaryotic and eukaryotic organisms including their biological behavior, their molecular structure and genetic function, their gene products, and their use as genetic tools.

Plasmid encourages the preparation of both minireviews and short, focused review articles in active areas of research involving extrachromosomal gene systems and mobile genetic elements. Such articles may be at the request of the Editors-in-Chief or, alternatively, authors may submit a short proposal for such a review to the Editors-in-Chief.

Manuscripts should be written in clear, concise, and grammatical English and should be submitted in triplicate (one original and two photocopies), including three sets of figures, to:

Plasmid
Editorial Office
525 B Street
Suite 1900
San Diego, California 92101-4495
Telephone: (619) 230-1840

Failure to receive the required number of copies of the manuscript may delay review. All copies of halftone artwork *must* be glossy prints or originals; photocopies of halftones do not show sufficient detail to be used for the review process.

Authors may suggest assignment to an editor or one of the Editors-in-Chief at the time of manuscript submission. Authors outside North America may elect to submit manuscripts directly to an appropriate member of the Editorial Board.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published and is not being considered for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editors' discretion. Articles and any other material published in *Plasmid* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editors and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of manuscript. Manuscripts should be typewritten with wide margins on high-quality bond paper, using double or triple spacing throughout. Subdivision of articles into Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, and References is recommended. The manuscript must begin with an Abstract. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given. Reviews of the literature should be restricted to closely pertinent papers. Tables, figures, names, quotations, and bibliography (and all text references to the same) should be carefully checked for errors. A proposed running head of no more than 37 characters should be included.

Figures and tables. Number all figures consecutively with Arabic numbers and give each one a descriptive legend. All illustrations should be submitted in such form as to permit photographic reproduction without retouching or redrawing. Line drawings should be professionally drafted and planned to fit the proportions of the printed page ($5\frac{1}{2} \times 8$ inches; column width, $2\frac{1}{2}$ inches). Lettering on drawings should be large enough to take a reduction of 50 to 60%.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. The photographs should be cropped to eliminate background material so that reproduction might be possible without reduction. Grouping of photographs should be indicated. For best reproduction provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. Illustrations in color can be accepted only if the authors defray the cost.

With respect to halftone prints, authors are reminded that they are responsible for ensuring that the quality of the print is sufficient to ensure clear reproduction. This refers especially to photographs of gels and electron micrographs. In case of doubt, Academic Press will be happy to provide advice.

Tables should be typed on separate pages, numbered consecutively, with Arabic numbers, and collected at the end of the manuscript. All tables must have descriptive headings and should be understandable without reference to the text. Footnotes to tables should be typed directly beneath the tables.

References. Names of authors should be mentioned in the text with the year of publication in parentheses. References should be listed alphabetically at the end of the paper as follows:

ENNS, R. E., GARLAND, A. M., AND SMITH, D. W. (1986). M13-*ori C* cloning vehicles: Use for amplification of high copy lethal (HCL) genetic elements. *Plasmid* **15,** 147–155.

MESSING, J. (1983). New M13 vectors for cloning. *In* "Methods in Enzymology" (R. Wu, L. Grossman, and K. Moldave, Eds.), Vol. 101, pp. 20–78. Academic Press, Orlando, FL.

The names of journals should be abbreviated according to the *Chemical Abstracts Service Source Index,* 1985.

Include in the reference list articles that are "in press," but incorporate in text or use footnotes for "manuscripts in preparation," "unpublished observations," and "personal communications."

Abbreviations and symbols. The author is asked to follow the usage established by "A Proposal for a Uniform Nomenclature in Bacterial Genetics" (Demerec *et al., Genetics* **54,** 61, 1966); and "Uniform Nomenclature for Bacterial Plasmids: A Proposal" (Novick *et al., Bacteriol. Rev.* **40,** 168, 1975). Abbreviations for units should follow the Système Internationale.

Nomenclature of microorganisms. Binomial Latin names, with authorities, should be used in accordance with the International Rules of Nomenclature. Binomials should be underlined in the typewritten copy. A specific name should not be used without an accompanying capitalized generic name. The generic name for each species should be written in full where it first occurs in the text, and again in the summary. Where the generic name appears frequently in the text it may be abbreviated by using the initial letter.

Short Communications. This section is open to short preliminary reports of important findings. They should not exceed 1000 words of text. Do not use any section headings except Acknowledgments and References. All Short Communications must have abstracts. Illustrative material should be kept to a minimum (usually not more than one table or figure).

Plasmid publishes physical and genetic maps of important plasmids and related elements. Descriptions of newly constructed cloning vectors will only warrant publication if their utility has been demonstrated. Manuscripts should be in the form of a short communication and should include a brief description of the element, a paragraph mentioning any special methods used, and another outlining the mapping strategy. A detailed description of the experiments should be provided with the manuscript. This will be made available to reviewers and will be filed by the editor-in-chief for future reference by interested parties. Its existence will be noted in the manuscript.

This section does not provide an accelerated means of publication, but is designed to offer the opportunity to present in brief form noteworthy results of works in progress.

Proofs. Proofs will be sent to the corresponding author with a reprint order form. Authors will be charged for excessive alterations.

Reprints. Fifty copies of each article are granted free of charge and authors may order additional quantities using the reprint order form provided with the proofs.

Personal computer disks. Manuscripts may be submitted to *Plasmid* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).
